SENNINGER IRRIGATION

*Honesty, Trust,
Loyalty, Respect,
Teamwork...*

Founded in 1963 in Orlando, Senninger Irrigation Inc. began calling Clermont Florida home in 2004. The move to Lake County involved the construction of a 94,000 square foot manufacturing and administration facility to compliment their pre-existing warehouse and R&D facility.

Senninger Irrigation designs and manufactures energy and water efficient sprinklers, spray nozzles and pressure regulators which are used for irrigation in 46 countries worldwide. Over the

years, they've led the irrigation industry with relevant innovations designed to meet specific needs. Their products, sold through 2,000 dealers worldwide, are used in agriculture, nurseries, and solution mining of copper, gold, and silver.

Senninger provides significant economical and environmental contributions to Lake County and Central Florida. A large portion of the company's revenue is disbursed into the local economy in the form of wages, utility usage,

local services and taxes. With these revenues being generated through worldwide product distribution, there is a significant net value to the Central Florida economy.

Senninger is committed to conservation. In addition to creating products that save water and energy, conservation is demonstrated within their operation as well. Senninger recycles the water used in product testing and cooling of injection molding machines. They also employ a process of recycling plastics by

using a portion of reground materials into new parts.

Of their 220 employees, one third has been with Senninger for more than 10 years and 10% for more than 20 years. About 90% of their employees work in Clermont with the remainder in other sales/warehouse locations in the US and other global markets.

Senninger's business activity requires a wide range of skills and talents. It all begins with research and development of new product designs and innovations, many of which come directly from requests of farmers and growers. Manufacturing includes injection molding parts, assembly into finished products and distribution to locations throughout the world. In order to meet the growing demand for their products, Senninger runs three shifts, 24-hours a day, five days a week. Sales and marketing personnel work closely together with customer service and technical

support team members to communicate the benefits of these products and the solutions they provide. Numerous administrative functions including IT, purchasing, accounting, and human resources hold it all together. The hourly average wage is consistently higher than the Lake County average.

Their employees represent more than 23 nationalities. The strength of this diversity of cultural backgrounds and experience has contributed to Senninger's success.

Senninger is truly committed to a group of core values, relying on them as their plumb-line for making decisions regarding people and business. You can see these core values – Honesty, Trust, Loyalty, Respect, Teamwork – literally etched in stone as you approach their entrance. The names of their employees flank these values and include brass insets with their years of service. 🌿
